

OFFICE MOVES UPGRADE EFFICIENCY

KUMON®

The relocation of branch offices is a good opportunity to reduce expenses by improving environmental efficiency. Kumon North America has recently had several offices move to better and more productive spaces.

The Atlanta Branch office moved to a building near the northern “perimeter” highway that loops around the city. The new office has sensors in each room that automatically turn the lights off when no one is there. The recycling of paper, bottles and plastics is also offered as a standard feature in the office complex.

The new Atlanta office is near a Metropolitan Atlanta Rapid Transit Authority (MARTA) rail station. Kumon Instructors and Associates can save fuel and reduce carbon emissions by taking MARTA to the office, and visitors no longer need to rent a car because there is a MARTA rail station at Atlanta’s Hartsfield International Airport.

“We looked for a location that would be convenient, efficient and within budget,” said Grace Massari, the Atlanta Branch Manager. “Efficiency includes recycling and smart technology to reduce our environmental footprint.”
